

# HPV VACCINE

protects your  
child from  
cancer.

**1 IN 4 AMERICANS HAVE HPV.**

Most don't know they have HPV. **HPV** causes certain cancers. **HPV** causes genital warts.

**14** million are newly infected each year.

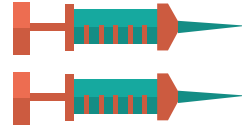

## HPV VACCINE

**PREVENTS 6 TYPES** of cancer including cervical, mouth, throat, anal, and other cancers that risk health and life.

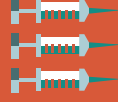

Yearly in the U.S., about **30,800** cases of cancer are caused by HPV.

Children should get vaccines **while their immune systems are developing.**

the **HPV VACCINE**  **IS SAFE AND EFFECTIVE.**  
**PROTECTION LASTS THROUGH adolescence and young adulthood.**

Children **ages 11 and 12** should have the vaccine. **This is when their immune system has the best response.** Most children who get the vaccine on time will only need two doses. **Children should be protected BEFORE they are exposed to HPV.**

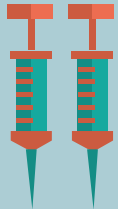

If they wait until **age 15**, they will need **three doses.**

# HPV VACCINE

protects your child  
from cancer.

Children ages  
**11 & 12**  
should be  
vaccinated.

Most will  
only need

**2**  
doses

**79 million Americans** have some form of HPV. That's **25% of the U.S. population**. Almost everyone will get HPV at some point in their lives if they do not receive the vaccination.
